## UPLIFTING KIZUNA (BOND)

In 2022, RAYS won the 24 Hours of Le Mans endurance race for the fifth consecutive year, a distinguished achievement. Governments of countries around the world have been working to achieve carbon neutrality, and the environment surrounding vehicles is changing in the racing world as well. It is because our wheels are genuine that we have been able to cope with these changes and to produce excellent results. We can do this because we have been thoroughly studying the lightness and strength that are demanded for wheels that link vehicles with roads. High-end uplifting wheels produced by our technologies honed in global competition becomes a "kizuna" that connect you to the future and to future vehicles.

# キモチ アガル キツナ

*The concept is racing.*

RAYS WHEELS

# ココロ オドル キツナ

EXCITING *KIZUNA* (BOND)

More than anything else, RAYS attaches importance to the best moments, encounters, and feelings that a "kizuna" brings about. People you did not know until yesterday, amusements, scenery, and more. We value exciting moments and people. At the first RAYS FAN MEETING, we truly felt that RAYS wheels have become bridges that connect people to others and to vehicles amidst diversification in car life. For this reason, we promise to put our heart and soul into creating appealing, prominent wheels that make you feel better when you obtain them as well as wheels that bring about an exciting "kizuna".

We held our first RAYS FAN MEETING at the Fuji International Speedway on April 24th. We thank the many who attended despite the bad weather. It was our great pleasure to have an opportunity to deepen our kizuna with everyone. Let's gather again someday.

RAYS FAN MEETING

RAYS original forged wheels are now top-end wheels and only RAYS can produce them. For our forged wheels, we combine our correct understanding of strength and lightness that can be achieved by forging with our reliable technologies that turn carefully selected materials into top-end wheels. We fully utilize our cutting-edge analysis techniques and refined proprietary manufacturing methods to thoroughly pursue lighter, stronger, and more beautiful wheels. The excellent strength realizes safety and security in all situations; the ultimate lightness increases driving pleasure; and the beauty evokes a sense of superiority ensuring you are proud of your wheels.

## TOP-END WHEELS YOU CAN EXPECT — RAYS FORGED WHEELS

### RAYS FORGED TECHNOLOGY

The key to RAYS forging method is "Analytical Technologies", making use of computers to determine whether the wheels' performance meets the target goals. This technology is used to optimally distribute the loads applied to the wheel during cornering and acceleration, strengthening the wheel to increase safety and peace of mind. These analytical technologies are constantly being updated with data gained from RAYS involvement in racing, and these advances in safety are then incorporated into RAYS commercial wheels.

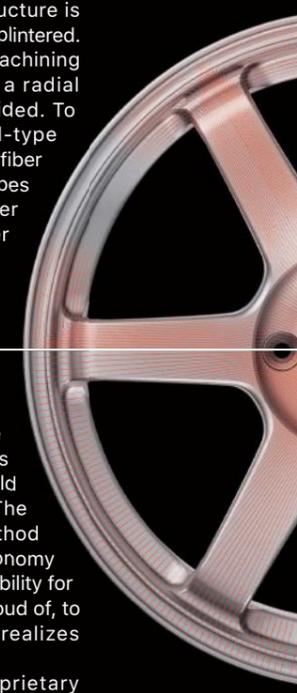

## MANIFESTATION OF NEW FORGING PERFORMANCE MOLD-FORM FORGING

In forged wheels, fibrous flows (fiber flows) form inside the aluminum. Such formation demonstrates that the internal structure is tough and has not been crushed or splintered. However, on wheels forged by a machining method, fiber flows form only in a radial manner; they are unavoidably divided. To prevent this, RAYS adopts a mold-type forging method. Under this method, fiber flows form into details along the shapes of the wheels. We prioritize stronger forged wheels that provide greater safety and security.

• Image of metal flow lines formed by the MOLD-FORM FORGING method

• Image of metal flow line formed by the MACHINING FORGING method

Moreover, RAYS has adopted the Mold-Form Forging Method that was developed by further advancing mold forging technologies on our own. The advantages of this proprietary method are lightness that improves fuel economy and controllability as well as designability for a beautiful finish that you can be proud of, to say nothing of the strength that realizes safety and security. The application of our many proprietary technologies is the strength of RAYS forged wheels.

## TOP-LEVEL SAFETY STANDARD "JWL+R SPEC.2" BUILT INTO THE STRONGEST OF FORGED WHEELS

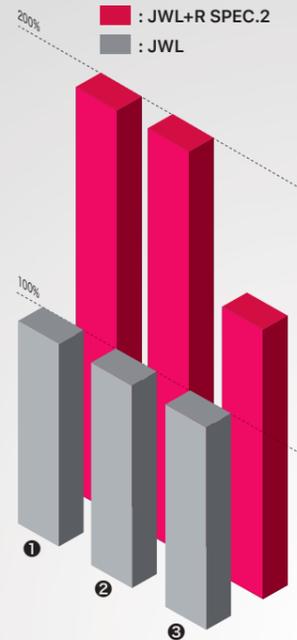

Sporting and safety performance should go hand in hand, which is why RAYS forged wheel series must satisfy our proprietary "JWL+R SPEC.2" safety standard — the highest in the industry. The strongest wheels are also the safest and most reliable. This lies at the core of our beliefs.

### TEST STRENGTH NUMERICAL COMPARISON JWL VS. JWL+R SPEC.2

- ① RADIAL STRESS TEST:  
JWL: 500,000 rotations  
JWL+R: 1,000,000 rotations
- ② ROTARY BENCHING FATIGUE TEST:  
JWL: 100,000 rotations  
JWL+R: 200,000 rotations
- ③ 13-DEGREE IMPACT TEST:  
JWL: Drop height 230mm  
JWL+R: Drop height 305mm

### JWL+R SPEC.2 ORIGINAL TEST

- 90-DEGREE IMPACT (90-DEGREE DROP) TEST:  
Drop height 140mm/ton
- POST-MODIFICATION DRUM TEST: 800,000 rotations
- FEM RIGIDITY ANALYSIS/ FEM STRENGTH ANALYSIS
- COATING PERFORMANCE TEST  
spraying salt water, coating, composite corrosion, adherence, weather resistance tests, etc.

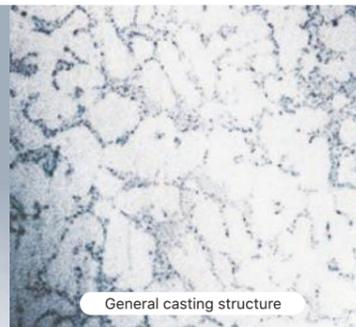

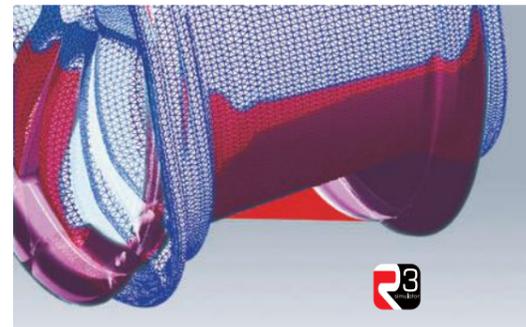

The RAYS cast wheel series pursues a more premium, beautiful design based on a leading-edge structure originating from motor sports. For the finish with original details we pursued product lightness, safety, and accuracy. The finish linked with various customized styles yields a peerless pleasure as well as a sense of luxury. This is where you can find true luxury that incorporates Hybrid Machining and many other RAYS patented technologies.

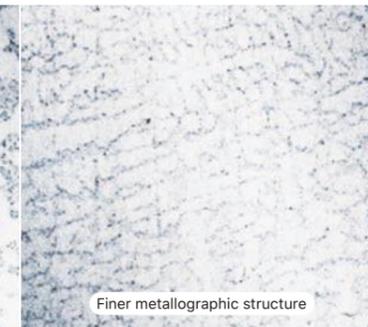

## UNRIVALED SENSE OF PREMIUM — RAYS CAST WHEELS

### RAYS CAST TECHNOLOGY

RAYS cast wheel charms are not limited to their evident beauty. They unstintingly incorporate the Camber Rigidity theory, which is employed to analyze wheel strength more practically and thoroughly, as well as high-accuracy cutting-edge analysis techniques. In addition, data obtained by testing using actual machines was also utilized to realize stronger, lighter, world-class premium cast wheels. Unique designability and appearance are combined with reliability and safety that are realized through our cutting-edge analysis techniques. RAYS cast wheels are distinguished by both their appearance and their substance.

General casting structure

Finer metallographic structure

## A FINER METALLOGRAPHIC STRUCTURE IS THE ESSENCE OF RAYS CAST WHEELS

To what degree the internal structure of aluminum materials can be made fine-this is the key to realizing stronger, lighter cast wheels. To do so for RAYS cast wheels, various RAYS proprietary technologies are applied lavishly: the TAF method to make the structure finer in order to achieve a molecular arrangement with higher bonding strength, and the RCF method for realizing a lightweight, high-strength rim shape by rolling. The lightness brought about by these cutting-edge technologies help to decrease the unsprung mass, which offers numerous advantages (e.g., higher fuel economy). Also, the strength directly links to the realization of good ride quality, a sense of security, and safety.

## JWL+R SPEC.1 ABSOLUTE GUIDELINES FOR SAFETY

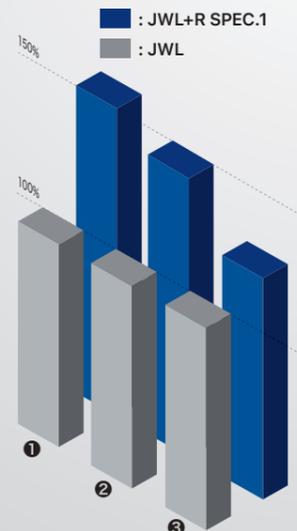

All RAYS wheels must satisfy our original safety standard, "JWL+R." This is more strict than the JWL standards set by the Japanese government. Assuring the higher safety is a precondition for our wheel production and the foundation on which we development all our technologies.

### TEST STRENGTH NUMERICAL COMPARISON JWL VS. JWL+R SPEC.1

- ① RADIAL STRESS TEST:  
JWL: 500,000 rotations  
JWL+R: 800,000 rotations
- ② ROTARY BENCHING FATIGUE TEST:  
JWL: 100,000 rotations  
JWL+R: 150,000 rotations
- ③ 13-DEGREE IMPACT TEST:  
JWL: Drop height 230mm  
JWL+R: Drop height 255mm

### JWL+R SPEC.1 ORIGINAL TEST

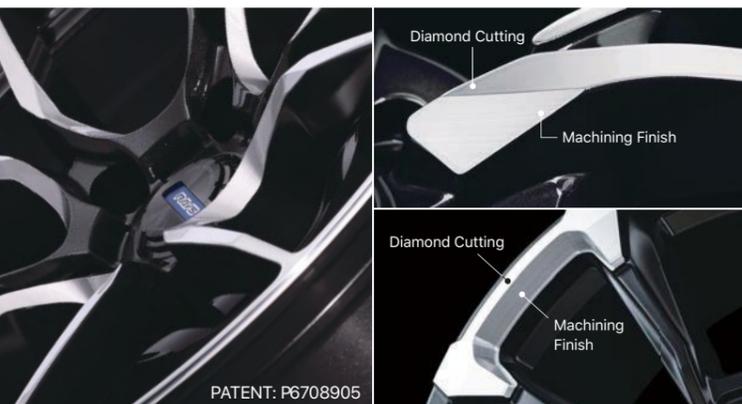

- 90-DEGREE IMPACT (90-DEGREE DROP) TEST:  
Drop height 100mm/ton
- POST-MODIFICATION DRUM TEST: 500,000 rotations
- FEM RIGIDITY ANALYSIS/ FEM STRENGTH ANALYSIS
- COATING PERFORMANCE TEST  
spraying salt water, coating, composite corrosion, adherence, weather resistance tests, etc.

\*What is JWL?  
Established in 1983 by the Ministry of Land, Infrastructure, and Transport for safety standards to be applied to "Light alloy disc wheels for passenger cars."

PATENT: P153437

PATENT: P6708905

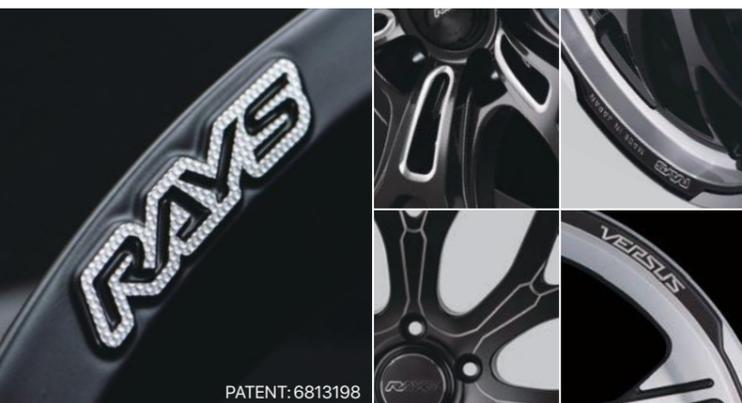

### BRILLIANT MACHINING TECHNOLOGY A.M.T.

A.M.T. is an innovative cutting technology to reproduce fine designs (e.g., brand logos) on three-dimensional curved surfaces. RAYS utilizes proprietary machining tools and technologies to process cut sections on stereoscopic carved surfaces and painted surfaces that vary among wheel types. The result is truly colorful expressions and brilliance depending on the lighting and viewing angle.

### THE UNPARALLELED ORIGINALITY OF HYBRID MACHINING

In Hybrid Machining, diamond cutting is used for the molded two-dimensional planes, while machining is used for tilted three-dimensional planes. The joints of both sections are also smoothly finished. Leading-edge processing harmonizes the different finishes and produces a profound glow.

## RAY'S ONLY ONE TECHNOLOGY

PATENT: 6813198

PATENT: P16208821

### DESIGN POWER THAT FULLY UTILIZES SURFACE TREATMENT

The combination of refined A.M.T. and diamond cutting technology has produced many more technologies: Stepping Machining, by which projections and depressions that produce a crystal-like glow are provided on molded top panels, and RALC, which makes wheels look more layered through cutting and dividing. Our cutting-edge surface treatment technologies are highly valued around the world.

### FINE COLORING

E-Pro Coat is a technology for exposing aluminum foundations by A.M.T. and then applying electrodeposition. It has been combined with the state-of-the-art painting technologies REDOT and RAP that are used to color small sections. The unprecedented glossy, fine, and expressive finish is our proprietary advanced technology.

OPTION COLOR 154

CENTER CAP 155-159

RAYS GEAR 160-169

OTHERS 170-171

**⚠ To professional outlets, retailers, and customers in regards to wheel usage (Read Carefully)**

Fitments listed in this catalog are for reference only and do not guarantee inspection, clearance, and/or the size mandated by local authorities. Selecting sizes is by your own judgement and we recommend consulting fitments with a professional outlet.

This aluminum wheel is suitable for "Technical Standards for Light Alloy Disc Wheels (JWL for Passenger Cars, JWL-T for Trucks and Buses)" In addition, it has passed the strict quality and strength reconfirmation test of the "Light Alloy Wheel Testing Council for Automobiles" and was given the VIA mark. For your safety, please observe the following contents.

■The combination of size, number of holes, P.C.D., inset and mounting surface shape determines whether the wheel can be mounted on a vehicle. It is dangerous to install incompatible wheels and tires, so please consult a professional outlet and be sure to use wheels and tires that are compatible with the installed vehicle. ■Be sure to use the included dedicated valve (or conformed valve) for the air valve. There is a risk of air leakage if the valve does not fit into the valve hole of the wheel properly. Be sure to always use a new valve. Do not reuse the valve once it has been removed, as it may cause air leakage due to aging of the surface including rubber. ■Be sure to check for air leaks after assembling tires. Pay particular attention to the contact surface between the tire and rim and the area surrounding the valve. If you continue to drive with air leaks, it is dangerous and may cause accidents, including unable to drive straight and damage to the wheels and tires. ■After assembling the tires, be sure to adjust the wheel balance for all wheels. If the balance is out of order, it may cause abnormal vibration and/or uneven wear of the tire. ■There are various types of mounting nut seats for aluminum wheels, such as tapered seats, spherical seats, and flat seats. Be sure to use the dedicated nuts and bolts after checking the screw diameter and pitch on the vehicle. Never use nuts and bolts with different shapes, as they cannot be tightened sufficiently and may loosen during driving. ■The mounting nuts are 50 to 70 N · m (5 to 7 kgf · m) for the recommended torque M10, 90 to 120 N · m (9 to 12 kgf · m) for the M12, and 160 to 180 N · m (16 to 18 kgf · m) for the M14. Please tighten accordingly. Overtightening the mounting nut may cause deformation of the bolt hole, hub hole, or damage the bolt. Insufficient tightening may cause the nut/bolts to loosen. When using an impact wrench, temporarily tighten it with a low torque, then tighten with the recommended torque. ■Depending on the model, brake drum temporary fixing screws, positioning pins, etc. may appear. If this hits the mounting surface of the wheel, etc., please consult your professional outlet. When mounting on a vehicle, make sure there is no contact with the vehicle body, suspension parts, etc. (for the front wheels, turn the steering wheel all the

way to the left and right, etc.). It is prohibited under Japanese law that wheels and tires sit past the vehicle body. Please make sure to absolutely avoid this situation. ■Be sure to check the tire pressure before driving and set it to the specified air pressure. Insufficient air pressure can damage tires and wheels even with a small difference. Since the mounting nut is easy to loosen at the initial stage of mounting and rotation (after traveling about 100 km), retighten with the recommended torque. Also, check regularly for looseness. ■Never drive unreasonably, such as sudden acceleration, sudden braking, or taking sharp turns, as it may not only damage the tires and wheels but also cause a serious accident. ■If you feel any abnormal vibration or noise while driving, immediately stop at a safe place and inspect. ■Be careful when riding on sidewalks, curbs, bumps, etc., as the wheels are prone to deformation and cracks. If any deformation occurs, discontinue use and consult a professional outlet or manufacturer. ■The rim of the assembly type (2 or 3 piece) multi-piece wheel and the connecting bolt of the disc are tightened to the specified torque at the time of manufacture. Never retighten or loosen it as it may lead to a serious accident. ■Never process or repair the wheel by a wheel repairer or by yourself. Wheels are an important part of the automobile, and their performance is stipulated in the technical standards of the Ministry of Transport, and wheel makers manufacture products with performance that satisfies the fatigue tests and impact tests stipulated in these standards. Repairing by welding, bending, etc. after manufacturing will cause a decrease in strength. Driving with wheels with reduced strength may directly lead to property damage and personal injury, which is extremely dangerous. ■Aluminum alloy has excellent corrosion resistance, but if it is left unmanaged for a long time with dirt, etc., the surface finish may become uneven. Always maintain a clean state by cleaning regularly. ■Road antifreeze agents in snowy areas, salt water, and sea breeze in coastal areas are extremely harmful to aluminum alloys. Always wash them thoroughly after driving. ■Please read the instructions carefully when using commercially available wheel cleaners and body shampoo agents.

**JWL** JWL Standard Conformity Mark (JAPAN LIGHT ALLOY WHEEL)  
This standard is applicable to light alloy disc wheels for passenger vehicles (excluding vehicles with riding capacity of 11 people or greater, motorcycles, and motorcycles with a sidcar) \*a scope for those exceptional cases are to be separately set). As per this standard, tests are conducted on manufacturers own responsibilities and products that have passed the tests are given a JWL seal mark.

**JWL-T** JWL-T Standard Conformity Mark (JAPAN LIGHT ALLOY WHEEL TRUCK & BUS)  
This standard is applicable to light alloy disc wheels for trucks and buses. As per this standard, tests are conducted on manufacturers own responsibilities and products that have passed the tests are given a JWL-T seal mark (the Minister of Land, Infrastructure, Transport and Tourism judges whether the subjected products meet the provisions in Article 9 of "Safety Standard for Road Transportation Vehicles" by confirming that they have these certification seal mark).

**VIA** Quality Inspection Approval Mark (VEHICLE INSPECTION ASSOCIATION)  
Testing is assigned from Japan Vehicle Inspection Association to Japan Light Alloy Automotive Wheel Testing Council (JWLTC Incorporation Foundation) to see the subjected products meet the national standard of JWL or JWL-T. As the national engineering standard requests self-certification, products in the aftermarket are tested at a third party testing public institution. Products whose status of conformity to the standard is confirmed are registered at JWTC and have the VIA certification seal mark.

**HYBRID MACHINING-1**

The spokes that naturally draw arcs dynamically descend from the rim flange to the center. The flow line changes abruptly towards the deepest point. This flow and surface cutting merge without interruption. The state-of-the-art detail can only be realized by RAYS proprietary Hybrid Machining.

Diamond Cut Finish  
Machining Finish

**57DNA TOPIC**

**HYBRID MACHINING-2**

For each pair of spokes, one has the concave highlighted, while the other expresses lively motion. The top panel height is made uneven and the surface is precisely machined by Hybrid Machining, which involves a specially developed edge. The shade changes depending on the angle from which it is viewed, making the creative spokes more expressive.

Machining Finish

#### FACE DESIGN

—: 18x7½J FACE-1 —: 18x9½J FACE-2 —: 19x8J

### VT125S TOPIC

#### RAP

The lettering logo of "VERSUS TURISMO" is new technology of RAYS: "RAP: RAYS Art Painting." This type of RAYS patented technology "A.M.T." engraved machining logo is a different taste compared with a sticker. In addition, the use of RAP has made it possible to paint individual parts to express separately. As a result, the VERSUS logo is decorated with a red clear and evolves into a uniqueness. The new logo letterings on opposite ends of the rim flange acts such like tire letters rotating on a race car.

### RALC

Brand new rim flange design "RALC": A new proposal from RAYS is the new design work, which is the fusion of the outer circumferential view of the wheel and rim. By fusion of the rim, which has not changed since ancient times, with the disk design as part of the design, RAYS has created a completely new expression. Design processing is applied to the rim flange, which is expressed as a lip. Expresses the impact when the wheel rotates more richly.
